

QUALITY, ENVIRONMENT, AND SAFETY POLICY

COSMO ENERGIA S.r.l. is the owner of a plant for the production of electricity from natural biomass from forest maintenance, for the production of electricity sold exclusively to the Italian national grid. It also recovers thermal energy from the exhaust fumes emitted during processing, which is used to power their internal production lines, resulting in energy savings and the containment of polluting gas emissions.

Since 2010, the biomass plant has processed 13,550 tons per year of natural plant material from waste and forest maintenance and generates 995kW of electricity per day, which is all sold to the national grid. It also recovers thermal energy from the exhaust fumes and ashes, which is reused in the plant's internal production processes, saving energy and containing polluting gas emissions.

Cosmo Energia has planted about 40,000 plants in the area, a total of 210,000 square metres of "green lung" to help improve the quality of the air.

The dynamic nature of the market and the constant demand for high quality environmental services have led to the expansion of the company's organisational and corporate system, and to the implementation of a Quality, Environment and Safety management system in accordance with the UNI EN ISO 9001, UNI EN ISO 14001, UNI ISO standards.

This organisational system is based on the service expected by clients, buyers, and other stakeholders and what COSMO ENERGIA is able to offer.

"If we heal the earth, we heal ourselves"

(DAVID ORR)

Acutely aware of its leadership role, Management promotes and supports the commitment that the entire Organisation must fulfil the requirements of the Integrated Management System and continuously strive to improve it.

In this context, the objectives that the Management undertakes to achieve are:

- Identify the risks associated with the company's activities and the opportunities for improvement, planning any subsequent actions required;
- Achieve a high level of customer satisfaction by analysing the customers' expressed or implicit needs;
- Monitor their company's impact on the environment and examine the life cycle of their services and products to avoid pollution or disturbance to the local community and other interested parties, ensure a more effective management of any environmental emergencies and look for new ways to reduce their impact on the environment through the adoption of the cleanest, most economically feasible technologies available on the market;
- Maintain a proactive approach of continuous improvement of the health and safety indices, taking into account the factors of primary importance, in order to reduce the risk of accidents and occupational disease;
- Ensure compliance with applicable legislative and voluntary requirements;
- Choose suppliers who adopt clean technologies and respect the health and safety of their workers, preferring companies that have environmental, safety and/or quality management systems in place, with a view to raising awareness and participation;
- Collaborate with public authorities, local communities, and other parties who have a legitimate interest in the company's activities.

To achieve these objectives, the Management guarantees the availability of the necessary resources and promotes a culture of continuous involvement, consultation, training and retraining of personnel at all levels, increasing their skills and levels of professional satisfaction and individual development, since it is only possible to achieve the set objectives and protect the health and safety of workers and the environment with the collaboration of everyone involved.

The commitments made in this Policy are translated into a plan of objectives defined and measured using the appropriate indicators, with planning of relevant activities to help to achieve them. This plan is re-examined at least once a year, as is the adequacy of the integrated management system.

This Policy is periodically reviewed and, if necessary, revised on the occasion of the Management and Systems review, and the Management undertakes to make it available internally and externally, while encouraging its partners to do the same.
